

# Comparing Monitors

Understanding the differences to match the right speaker to the right system

## SKY

## Signature ONE

**Discover Yours:** **SKY** was designed for today's extremely varied world of consumers. Sky **satisfies the audiophile, movie enthusiast, and gamer** alike and while it is not particularly demanding, it appreciates better electronics that help bring out its dynamic ability.

**Signature ONE** works efficiently with moderate electronics but **truly shines with more powerful amplifiers**. **Gigantic imaging** and tonal accuracy maintain the artists original intentions for listening experience that **embodies the Totem experience**.

**Woofers:** **SKY** features a very robust **5"** woofer equipped with a **3"** voice coil. **Signature ONE** employs a **6.5"** woofer derived from the venerable Forest. This larger woofer, along with the increased cabinet volume, allows the Signature ONE to descend lower than the SKY, **45Hz vs 48Hz**.

**Tweeter:** **SKY's 1.3" soft dome tweeter** is **detailed, precise**, and very **forgiving** to average quality amplification and sources. **Signature ONE's tweeter** is a **1" aluminum dome** housed in a rear chamber that lowers resonances and adds significantly to its power-handling ability by functioning like a heatsink. It is precise and truthful, able to reveal all the details, good and bad, of a system and recording.

**Power handling:** **SKY** handles **30-125w**, more than enough for most systems. Signature ONE is rated at 50-200w. Signature ONE's pedigree is one of sophistication and performance, and enjoys being driven at higher levels.

**Placement:** **Signature ONE** is a reference level monitor and benefits from proper placement to take full advantage of its remarkable ability. **SKY** can be placed **closer to boundaries, closer together, and farther apart from each other**. SKY maintains a spacious soundstage even in bookshelves and at different heights.

**Inputs:** **Sky** is equipped with two sets of terminals for bi-wiring or bi-amping. Signature One is as well, but uses gold plated WBT terminals in an annealed aluminum plate to capture the purest signal and eliminate resonances.
