

SPECIFICATION SHEET

Storm Sub

The Totem Storm Sub is one of the most flexible high-performance subwoofers available. The Storm Sub shares external cone topography and material with the two flanking passive units, resulting in a more informative and less compressed energy flow. Designed mostly for cinema/surround applications, the Storm Sub is very comfortable in a stereo or multi-channel audio environment.

The Storm Sub offers automatic power-down, its amplifier going into standby when signal is absent and reactivating automatically on signal reception. Other features include volume adjustment, variable phase dial, a pair of low-level RCA inputs and a crossover enabling/disabling switch to use low frequency management and control from processor.

Optional grill available.
