

SPECIFICATION SHEET

Thunder II Sub

The Totem Thunder II Sub's advanced technology offers a continuous energy flow and musical presence. Designed for cinema/surround applications where it excels, it performs admirably well as a bass module for stereo or multi-channel audio use.

The Thunder II Sub's unique front-firing, active driver shares external cone topography, material and features with the two flanking passive units. This offers a more informative and continuous energy flow. The Thunder II intermeshes seamlessly with all Totem products for any tasks where bass augmentation is required.

Optional grill available.
